

Game Developer – Interview Prep Guide

Q: What is the role of a game developer?

A: They design, code, and implement gameplay mechanics, graphics, AI, and physics for interactive games.

Q: Which programming languages are most used in game development?

A: C++, C#, Python, and JavaScript for scripting.

Q: What engines have you worked with?

A: Unity, Unreal Engine, Godot, and CryEngine.

Q: How do you optimize game performance?

A: By reducing draw calls, using object pooling, optimizing shaders, and profiling memory usage.

Q: What is the difference between game design and game development?

A: Game design = creative vision and mechanics; Game development = technical implementation.

Q: How do you ensure cross-platform compatibility?

A: By testing on multiple platforms, using portable frameworks, and avoiding hardware-specific features.

Q: What is a game loop?

A: It's the cycle that updates game logic, processes input, and renders graphics continuously.

Q: Describe a project where you solved a major bug.

A: I resolved a memory leak issue in Unity by optimizing asset loading and garbage collection.
