

Tech Project Manager – Interview Prep Guide

Q: What does a tech project manager do?

A: They oversee planning, execution, and delivery of technology projects while managing teams, budgets, and timelines.

Q: How do you manage scope creep?

A: By using change management processes, maintaining a clear project scope document, and ensuring stakeholder approvals.

Q: Which project management methodologies do you use?

A: Agile (Scrum, Kanban), Waterfall, and hybrid approaches depending on project needs.

Q: How do you prioritize tasks in a project?

A: By using frameworks like MoSCoW (Must, Should, Could, Won't) and aligning with business priorities.

Q: How do you ensure stakeholder communication?

A: I use regular status reports, stakeholder meetings, and project dashboards for transparency.

Q: What tools do you use?

A: Jira, Trello, MS Project, Asana, Confluence, and Slack for collaboration.

Q: Describe a challenging project you managed.

A: I handled a large ERP implementation with tight deadlines, managed scope via Agile sprints, and delivered successfully.

Q: How do you handle risks?

A: By maintaining a risk register, proactive identification, mitigation planning, and contingency budgeting.
